

# CABLExpress zClip™ harness solution for the IBM z15™ System

Cable your IBM z15™ system for optimal performance, greater airflow, easier access, and impressive looks with the CABLExpress zClip™ harness solution.

The zClip's patent-pending design quickly connects to the spine of the z15 system, allowing precise positioning of your Skinny-Trunk® harness fiber cable assemblies. The design of the zClip easily adapts to cabling that routes to the mainframe from either under the floor or from overhead.

Compared to connecting individual jumpers to the individual ports and destinations, the zClip and harness system reduces connection points by more than 37%.

## Ease of Installation:

- Reduces cable congestion in the z15 spine by more than 80%
- Fully compatible with the CABLExpress port replication™ design
- Built-in cable routing loop and funnel for proper routing and positioning
- Complete 180-degree mounting orientation capability
- Designed to strategically position eight harnesses at a time directly in front of active components
- Completely modular and can be repositioned along spine easily
- Supports both multimode and singlemode direct attach harnesses
