

▶ H-Series 12U Enclosure Tech Sheet

Our CABLEExpress 12U H-Series Enclosure is designed specifically to replicate 64 port high density SAN director class switches. This allows users to fully replicate their director class switch in a main distribution area (MDA) as recommended in the TIA-942 Data Center Standard. The 12U H-Series enclosure allows significantly more spacing in between ports which makes working with the patch cables in this enclosure a breeze. 48 and 32 port modules also available to offer full replication for any density.

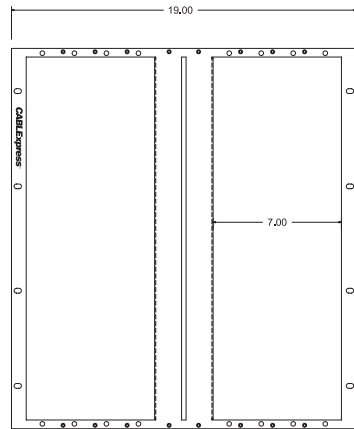

FEATURES

- Low loss components offer optimum performance and manageability
- Stable spring couplers minimize vibration
- Molded angled MTP couplers allow for optimum rear cable management
- Rugged design allows fiber to remain secure
- Slide out labeling tray with one to one port mapping
