

H-Series 10U 8-Slot Enclosure Tech Sheet

Our CABLEExpress® H-Series 10U 8-slot enclosure is designed to provide port replication of all major hardware manufacturers' enterprise-class switches. This allows users to fully replicate their director class switches in a Main Distribution Area (MDA) as recommended in the TIA-942 data center standard.

The 10U H-Series enclosure allows significantly more space in between ports to make working with patch cables easier. It comes with either vertical or horizontal modules allow for exact port replication.

Features

- Low loss components offer optimum performance and manageability
- Molded angled MTP® couplers allow for optimum rear cable management
- Rugged design allow fiber to remain secure
- Couplers minimize vibration
- Slide-out labeling tray with one-to-one port mapping located in center of enclosure
