

# ▶ Ladder Rack Enclosures

**CABLEExpress®**

The Skinny-Trunk® ladder rack enclosures are multimedia patch panels that mount directly to overhead conveyance for added space in the data center. Available in full-size (up to 192 LC duplex ports or 96 copper ports) or mini (up to 96 LC duplex ports or 48 copper ports), they're the first enclosures specifically designed to live above the rack. Ladder rack enclosures allow customers to stay in compliance with TIA-942 standards, while increasing manageability, keeping dB loss to a minimum and freeing up valuable rack space. Like all CABLEExpress brand products, ladder rack enclosures are backed by a lifetime warranty.

## Features

- Mount to overhead conveyance (ladder rack and basket tray) to save valuable conditioned space in the data center.
- Easy, one-person mounting saves time and money on install.
- When fully-populated, the full-size enclosure can hold up to 192 LC duplex ports or 96 copper ports (or a combination of the two), and the mini can hold up to 96 LC duplex ports or 48 copper ports.
- 48 copper ports (or a combination of the two).
- Full-size accepts 16 modules or feed-through adapter panels, mini accepts eight.
- Separate channel available for flexible telescoping cable management.
